

NANDITHA S MURTHY

Technical Program Manager | AI Platform Delivery | Governance & Cross-Functional Execution

Oakville, ON, Canada | +1 (224) 622-9801 | nanditha.murthy@gmail.com | LinkedIn | GitHub

SUMMARY

Senior Technical Program Manager with 13+ years defining, planning, and executing large-scale technical programs across DevOps, platform scalability and reliability, and security process in regulated environments (banking, healthcare, medical devices) with growing focus on AI/ML platform delivery, governance, and translating ambiguous strategic priorities into executable, cross-functional roadmaps. Led cross-functional programs spanning 8+ lines of business, delivering 99.99% uptime platforms supporting \$1B+ daily transactions with zero audit violations. Applies technical program management methodologies to drive efficiency and predictability in software engineering, turning ambiguous problems into reliable, compliant, scalable delivery. Currently focused on AI-native agentic systems and LLM platform governance.

CORE COMPETENCIES

Technical Program Management Methodologies · Program Governance · Roadmap Planning · Risk Assessment · Stakeholder Alignment · Cross-Functional Program Execution · Change Management & Impact Analysis · Vendor & Partner Management · Agile / Scrum / Kanban / SAFe

TECHNICAL STACK

Cloud / DevOps: AWS (EKS, Lambda, S3, EC2), Azure (AKS, App Service, CosmosDB, Key Vault), Docker, OpenShift (Kubernetes), VMware, Jenkins, GitHub Actions, CI/CD, Terraform (IaC)

Scripting & Automation: Python, PowerShell, YAML, Shell, Jenkins pipelines, n8n, Webhooks, Feature Flagging **Languages /**

Frameworks: Java 17, Spring Boot / MVC, Node.js, TypeScript, JavaScript, FastAPI, React/Next.js

Data / Messaging: PostgreSQL, MongoDB, MySQL, Oracle, DB2, Kafka, JMS, Redis

Security & Observability: HashiCorp Vault, SOC workflows, Datadog, Dynatrace, Splunk, Prometheus, Grafana

AI & Automation Platforms: Amazon Bedrock, Azure AI Foundry, GitHub Copilot, Copilot Studio, Claude, RAG Architectures, Prompt Orchestration, LLM Evaluation (LLaMA, Ollama, vLLM)

Methods & Tools: Jira, Confluence, Bitbucket, Linear, ADRs, UML, A/B Testing

CAREER HIGHLIGHT

- **Platform Reliability at Scale:** Achieved 99.99% uptime for API platforms supporting \$1B+ daily transactions across 8+ lines of business.
- **Audit & Compliance Excellence:** Zero audit violations across four consecutive quarters; 100% PCI audit compliance across multi-tenant financial services clients.
- **Delivery Velocity:** Increased release velocity 5× through CI/CD and governance pipeline automation (Jenkins, GitHub Actions, Terraform) while maintaining compliance standards.
- **Program Efficiency:** Reduced onboarding time 60% via 20+ reusable delivery assets (architecture designs, rollout plans, SRE playbooks); accelerated time-to-market 35% through stakeholder alignment.
- **Client & Team Outcomes:** 100% client retention, 30% increase in project scope, and 3 engineers advanced to senior roles through enablement and mentorship programs.

PROFESSIONAL EXPERIENCE

Technical Director - Divinity Science (AI-enabled digital health platform) *Remote | Dec 2025 – Present*

- Lead delivery of a privacy-first, AI-enabled healthcare platform in a highly regulated domain, owning roadmap, risk, and compliance outcomes with direct reporting to CTO/CEO.
- Translate ambiguous strategic and regulatory priorities into phased technical roadmaps and measurable delivery milestones for a privacy-first AI healthcare platform, reporting directly to CTO/CEO.
- Established program governance frameworks for a multi-agent AI orchestration system (GenAI), with data isolation, auditability, and HIPAA/GDPR compliance as core governance pillars.
- Evaluated open-weight LLMs (LLaMA variants) using Ollama and vLLM; conducted hands-on benchmarking to inform model selection for privacy-sensitive, on-premise healthcare deployment.
- Implemented environment-based feature flags and phased rollout configuration across dev/staging/production, enabling safe, incremental AI feature delivery.
- Prepare structured updates and risk/trade-off narratives for executive stakeholders, translating technical constraints (model selection, compliance gating, deployment risk) into business-ready decisions.

Technical Lead / Technical Program Manager - TD Bank (via Wipro) *Mississauga, ON | Aug 2021 – Apr 2025*

- Defined, planned, and executed large-scale technical programs for a mission-critical API platform serving 8+ lines of business, spanning DevOps automation, security process, and platform scalability and reliability, achieving zero audit violations across four consecutive quarters.

- Managed a globally distributed team of 7 engineers delivering 15+ mission-critical initiatives with 95% sprint predictability and zero rollbacks, driving continuous improvement across delivery workflows.
- Directed backend modernization and unified API/data platform strategy across AWS, Azure, OpenStack, and VMware spanning 8+ lines of business, reducing latency 30% and achieving 99.99% uptime supporting \$1B+ daily transactions, establishing shared platform standards adopted across multiple domain teams.
- Automated CI/CD and governance pipelines (Jenkins, GitHub Actions, Terraform), increasing release velocity 5× while maintaining compliance standards.
- Reduced compliance and data-governance risk 25% through data/consent service POCs, establishing trusted data handling patterns across program milestones
- Defined project governance frameworks for PCI-compliant deployment strategies across multi-tenant financial services clients, ensuring 100% audit compliance.
- Established program health metrics and KPI/OKR tracking frameworks, providing executive-level visibility into risk, dependencies, and decision impact across the platform portfolio
- Reduced onboarding timelines 60% through 20+ reusable delivery assets (architecture designs, rollout plans, SRE playbooks); led change impact analysis across 8+ teams during IBM-CMOD and AIX-to-RHEL 8 transformations with zero Sev-1 incidents.

Associate Vice President - Global Markets Technology (Futures & Options Execution) - Citi *Mississauga, ON* | Feb 2020 – Jul 2021

- Owned execution and reliability for global futures and options platforms; led change management for business-critical enhancements, accelerating release timelines 25%.
- Drove delivery across Java, Spring Boot, JMS, MongoDB, and messaging platforms; technical lead for audit-file processing pipelines (Apache Camel) while coordinating consultants for predictable backlog delivery.
- Established quality and reliability standards through code reviews and test strategy, maintaining 100% compliance with internal controls.
- Resolved Sev-1/Sev-2 incidents with 15-minute average resolution, sustaining 99.99% uptime; improved cross-team delivery efficiency 20% and reduced incident recurrence 30%.

Technology Analyst - Apple Inc (via Infosys) *Bangalore, India* | Jul 2016 – Sep 2019

- Led a 4-member team delivering iTunes reconciliation and entitlement platforms (Java, Spring MVC, MongoDB, REST), owning project planning, requirements elicitation, and solution design.
- Built ETL pipelines (Spring Batch) and reporting services with MongoDB aggregation, supporting multi-format exports and production support across finance and engineering stakeholders.

Software Engineer - Dexcom *San Diego, CA* | Nov 2014 – Sep 2015

- Developed and validated the Bluetooth Low Energy interface for the G5 Mobile Continuous Glucose Monitoring product (transmitter–receiver and iPhone–transmitter), an FDA-regulated Class III medical device.
- Built SOAP/REST web services exposing application operations to monitor product data transfers; developed system unit tests and data-stream parsing.

Earlier: Firmware Engineer Intern, West Health (wireless fetal monitoring, BLE, I2C) · Technical Associate, Tech Mahindra (E2E telecom platform testing for BT) · STEM Fellow (Volunteer), Teach For America.

AI ENABLEMENT PROJECT

Bumblebee Beats / EmoConnect - Zero Trust AI wellness platform | June 2025 – Present

- Architected a multi-agent safety pipeline (crisis detection, OPA consent enforcement, LLM inference, governed self-improvement) where no output reaches users without passing all safety stages; defined a phased AI roadmap across 79 user stories with safety invariants as sprint exit criteria targeting GDPR/HIPAA/PHIPA.
- Ran open-weight LLMs locally (Ollama, vLLM) for privacy-preserving on-device inference; implemented RAG architecture, prompt orchestration, and Human-in-the-Loop approval with no self-approval path.

EDUCATION

Master of Science, Computer Science - San Diego State University *San Diego, CA* | 2012 – 2015

Bachelor of Engineering, Electronics & Communication - SJB Institute of Technology (VTU) *Bangalore, India* | 2005 – 2009

CERTIFICATIONS

Certified SAFe® 6 DevOps Practitioner (Scaled Agile, valid through Jul 2026) · Certified SAFe® 6 Product Owner/Product Manager (Scaled Agile) (2024–2026) · AI in Health Care: From Strategies to Implementation (Harvard Medical School / Emeritus) · Google Project Management Certificate (Coursera) · Oracle Certified Associate, Java SE 8 Programmer

Work Authorization: Eligible to work in the U.S. without employer visa sponsorship · Open to relocation (San Francisco Bay Area)
